

# WONDER AIR

Wonder Air is an innovative blend that combines selected pharma-grade phytomolecules with a low level of monoglycerides. Wonder Air supports the health of the respiratory system, including the lower respiratory tract. Enriched with terpenes and monoterpenes in a synergistic combination with other phytomolecules in its formula, Wonder Air maximizes immune response, anti-inflammatory, and expectorant effects. Lower respiratory tract infections are a major cause of poor condition and problems in racing pigeons. The antioxidant, anti-inflammatory, and immunostimulant properties of the phytomolecules in the product are combined with balsamic, mucolytic, and expectorant actions. Wonder Air can be effective in cases of respiratory issues or the risk of respiratory diseases, such as infectious bronchitis, chronic respiratory disease, and coryza infections.

**NEW PRODUCT**

## WONDER AIR works as:

**EXPECTORANT • ANTIOXIDANT • ANTI-INFLAMMATORY  
IMMUNOSTIMULANT • STIMULATION OF DIGESTIVE ENZYMES  
TROPIC EFFECT ON GUT MUCOSA**

Wonder Air has been **tested** in **Belgium** and **Italy** in 2024 season to **manage successfully** respiratory problems.

## WONDER AIR recommended for:

- » Supporting the health of the respiratory system, including the lower respiratory tract
- » Enhancing resistance and aiding the healing process in cases of infectious bronchitis and Newcastle disease
- » Managing chronic respiratory disease
- » Boosting resistance and supporting recovery from coryza infections
- » Improving resistance to heat stress
- » Providing protection against both sub-clinical and clinical bacterial and viral diseases
- » Improving droppings quality (reducing ammonia levels)

## WONDER AIR helps reduce:

- The impact of infectious bronchitis (IB), Newcastle disease (ND), and chronic respiratory disease (CRD)
- The effects of coryza infections
- The need for antibiotics and medications
- Issues caused by clinical and sub-clinical diseases
- Heat stress
- Pro-inflammatory factors

## HOW TO USE

**Breeding period:** 5/10ml per liter of water 3 days every 2 weeks.

**Young pigeons:** 10 ml per liter 3 days every 2 weeks.

**Flight season:** 10 ml/liter 2/3 days depending on the need middle of the week (es. Tue. and Wed.)

In case of respiratory problems (red throat, yawning, dirty noses, rattling, wet eyes, one-eye cold, snot)  
10/15ml per liter of water 5 consecutive days.

It is recommended to combine Wonder AIR with Wonder Pigeon or Wonder Turbo, Wonder AIR is safe to use thanks to its natural ingredients, it remains stable even under heat and it is compatible with all other products and medications.
