

WONDER TONIC

WONDER TONIC is the result of 20 years of research in the field of plant-based molecules, with molecular extraction at a pharmaceutical purity grade. It combines small amounts of fatty acids with more than 15 types of phyto-molecules, carefully selected to work synergistically. This balance enhances each molecule's antioxidant, anti-inflammatory, and immune-supporting properties. Scientific studies show that Wonder Tonic can increase antibody production in response to infections or after vaccinations.
