

# JUST A FEW DROPS FOR THE TOP

WONDER TURBO

*WONDER TURBO is our masterpiece, the result of two years of studies followed by two years of field tests. It is an innovative mix developed specifically for racing pigeons of mono and diglycerides of short and medium chain fatty acids that overturns the percentages usually used in a single formula and maximizes the synergy between the components, enhancing their properties and beneficial effects on health and metabolism in periods of competition, stress, metabolic disorders.*

## RESULTS

Wonder Turbo was tested in 2021 and 2022 during the racing season in a few selected lofts in Belgium and Italy and the results were above expectations.

Pascal Arien: "True improvement concerning natural health condition and recuperation and very easy to prepare pigeons to race 500-700 km weekly! I banned all oils and proteins and reduced the recup products with at least 50%.

I truly believe this Wonder Turbo can fuel the pigeons a whole season long without additional energy products.

Because the pigeons were in such a good shape all the time no trico nor cocci was observed at any time (including breeders and youngsters)."

### WONDER TURBO why?

**NATURAL ANTIBACTERIAL ACTIVITY** Healthy pigeons with no or extremely low needs of medications

**INCREASED LEVEL IN DIGESTION PROCESS** Less energy wasted on same intake of food and water

**FAST RECOVERY AFTER EFFORTS AND STRESS** Pigeons ready for next step hours/days before

**BOOST OF ENERGY AND POWER** Muscles with much more fuel to burn

**BODY METABOLISM OPTIMIZED** Pigeons with super vitality, better droppings, silky feathers

**STRONG IMMUNITY SYSTEM** Pigeons develop a natural resistance to unfavorable conditions

**NO CONTRAINDICATIONS** Pigeons can assume it mixed or in combination with other products

**EASY FANCIER LIFE** Average super condition with less products, less efforts, less stress

**SELF BELIEF** Test it in only one loft for 5 days and compare to others

### INSTRUCTION FOR USE

It can be used at every stage - **coupling, breeding, racing, moulting** - in the drinking water or on the food.

**The everyday dosage** is 2/3ml per liter of drinking water or 4/6ml per kg of food.

In case of weakness, efforts and stress the dose should be doubled.

**Racing season:** race day and day after the race 3ml per liter.

**Day of basketing and day before** 4ml per liter or 8ml per kg of food.

**For a magistral effect we always advice to combine it with Wonder Pigeon and Wonder Protect.**
